

School System Management

1. Home screen prompts the user to enter the information needed. For example, the user will need to enter the student's name in order to receive the information about them like their age, gender, and current homeroom class.
2. If the user wishes to look up another student's information, they must press the back button and enter another student's name to start the process from the beginning.
3. An error will occur if the name presented is not spelled correctly nor in the system so it will prompt the user that the student does not exist.
